

GREENBYTE

Every byte counts. Make it green.

Team Rooted Minds • PES University

Digital sustainability for everyone—students, campuses,
companies.

The Hidden Problem: Our Digital Footprint

We often focus on visible pollution like plastics and traffic, but our digital lives also leave a significant carbon footprint. These invisible emissions add up, silently draining energy and contributing to climate change.

1

A Single Email

0.3g CO₂ per email. Imagine that across billions daily.

2

Silent Drain

Duplicate photos and idle cloud storage consume energy needlessly.

3

Campus Scale

Small digital habits, multiplied by thousands, generate tons of CO₂.

"Solving one problem mustn't create another."

Why Now? Our Insight.

While technology advances bring efficiency, they often carry hidden environmental costs. Energy-efficient chips require rare-earth materials, and increased cloud storage simply shifts the energy burden to massive data centers.

Our focus is on the most impactful area: everyday digital habits. This is where we can achieve significant change with low adoption friction, making digital sustainability accessible to all.

What is **GREENBYTE**?

GREENBYTE is a lightweight digital assistant designed to audit your digital footprint, prioritize quick wins, and show you the live CO₂ impact of your actions.

Inbox Clean Sweep

Declutter emails, reducing server load.

Photo & File De-dupe

Identify and remove redundant files.

Cloud Trim

Optimize cloud storage usage.

GreenPoints

Gamified rewards for sustainable habits.

Your Impact Dashboard

See your personal contribution to a greener planet in real-time. Our intuitive dashboard makes your efforts tangible and motivating.

2,384

Emails Cleaned

18.6 GB

Storage Trimmed

72.3 kg

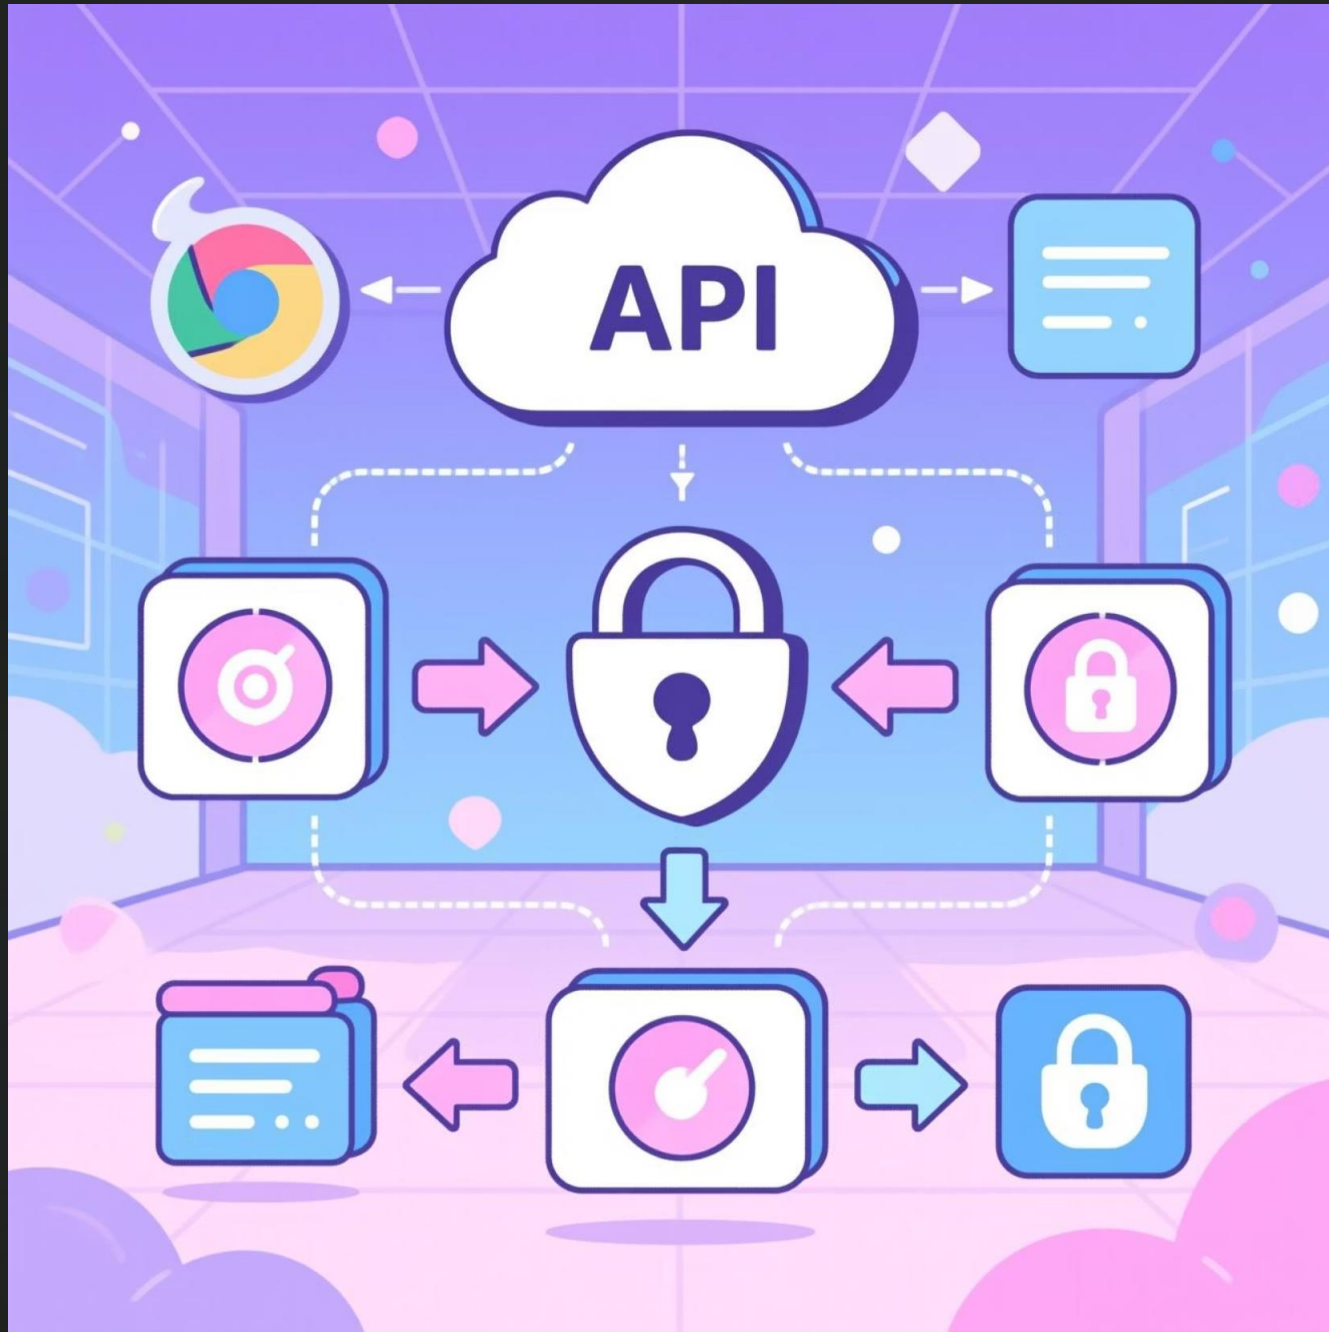

CO₂ Saved

How It Works: Feasibility & Privacy

Our architecture uses a lightweight browser extension or desktop application that securely integrates with your existing services (Gmail, Outlook, cloud storage APIs).

Privacy First:

- On-device by default
- Granular consent controls
- OAuth for secure access
- Undo actions anytime

We use heuristics and light machine learning to identify duplicates and newsletter patterns, offering dry-run previews before any deletions. Your data remains yours.

Quantified Impact: Every Action Matters

Even small digital cleanups accumulate into substantial energy savings. Imagine the collective power when millions adopt these simple habits.

~40 Wh

Energy avoided per 100 emails deleted. That's enough to charge your smartphone several times!

50,000 homes

Powered for a day if 10 million users optimize their digital habits monthly.

Campus Lever: Empowering one student's habits can inspire and influence the entire cohort, creating a ripple effect.

Go-to-Market & Incentives

Our strategy focuses on high-impact communities and scalable incentives to drive widespread adoption and sustained engagement.

1

University Launch

Leaderboards, eco-challenges, and hackathons to engage students and faculty.

2

GreenPoints Marketplace

Exclusive discounts, charitable donations, and access to campus perks.

3

Corporate Pilot

Employee challenges, sustainability dashboards, and CSR reporting for businesses.

Roadmap & Differentiation

Our Strategic Roadmap

01

Phase 1

Inbox + Duplicate MVP (Campus Pilot)

02

Phase 2

Cloud Trimming + Marketplace v1

03

Phase 3

Corporate Dashboard + Partner API

What Makes Us Different

- **Actionable Cleanups:** Verified impact, not just awareness.
- **Frictionless Start:** Easy browser extension or app, on-device processing.
- **Scalable Incentives:** Gamified points and robust partnerships.

"Delete the junk. Save the planet."

**“Your small digital habit today can power
thousands of homes tomorrow”**

Be the change in the Cloud
